A Tiddler, at its heart, is a basic unit of data within TiddlyWiki. Think of it as a individual element from which entire wikis are assembled. Each Tiddler is a self-contained item containing both its own content and metadata. This content can range from a brief note to a complex document, complete with images, links, and embedded code. The metadata, on the other hand, provides essential additional information about the Tiddler itself, such as its title, tags, creation date, and modification history.
