Each sprint aims to yield a working increment of the final result. This method allows for ongoing feedback, adjustment, and refinement throughout the project lifecycle.

- **Improved Collaboration:** The close collaboration within the Scrum team cultivates a feeling of shared accountability and control.
- **Sprint Review:** At the end of the sprint, the team presents the functional result increment to the stakeholders and receives feedback.
- **Start small and iterate:** Begin with a small project and gradually grow the use of Scrum.
- **Product Owner:** This individual is liable for defining the product backlog, a ranked list of capabilities that need to be developed. They serve as the spokesperson of the customer or clients, guaranteeing that the product meets their requirements.
- **Faster Time to Market:** The progressive generation of working software allows for faster releases and quicker responses.
- **Train the team:** All team members should be educated in the Scrum principles and practices.
- **Development Team:** This is a self-organizing and cross-functional team responsible for developing the product. They evaluate the effort required for each assignment, plan their work, and carry out the sprint.

Implementing Scrum needs a transition in perspective and culture. It's crucial to:

- **Sprint Planning:** The team schedules the work for the upcoming sprint, selecting items from the product backlog and dividing them down into smaller, achievable tasks.
- **Sprint Retrospective:** The team reflects on the past sprint, discovering what succeeded well and what could be refined.
