Unscaled

Unscaled

Unscaled identifies the forces that are reshaping the global economy and turning one of the fundamental laws of business and society -- the economies of scale -- on its head. An innovative trend combining technology with economics is unraveling behemoth industries -- including corporations, banks, farms, media conglomerates, energy systems, governments, and schools-that have long dominated business and society. Size and scale have become a liability. A new generation of upstarts is using artificial intelligence to automate tasks that once required expensive investment, and \"renting\" technology platforms to build businesses for hyper-focused markets, enabling them to grow big without the bloat of giant organizations. In Unscaled, venture capitalist Hemant Taneja explains how the unscaled phenomenon allowed Warby Parker to cheaply and easily start a small company, build a better product, and become a global competitor in no time, upending entrenched eyewear giant Luxottica. It similarly enabled Stripe to take on established payment processors throughout the world, and Livongo to help diabetics control their disease while simultaneously cutting the cost of treatment. The unscaled economy is remaking massive, deeply rooted industries and opening up fantastic possibilities for entrepreneurs, imaginative companies, and resourceful individuals. It can be the model for solving some of the world's greatest problems, including climate change and soaring health-care costs, but will also unleash new challenges that today's leaders must address.

Summary of Hemant Taneja & Kevin Maney's Unscaled

Please note: This is a companion version & not the original book. Sample Book Insights: #1 In the twenty-first century, technology is driving the opposite: small, focused, and nimble companies can now compete against big, mass-market entities. This is called unscaling. #2 In his book, Taneja shares the story of one of his companies, Livongo, which provides personalized healthcare at a fraction of the cost. #3 Tullman was interested in diabetes, and he and his team developed a solution that uses a small, mobile device that tests both glucose and activity levels. The device communicates with an AI system via cellular networks to share data. #4 The traditional medical field has failed to provide a solution for people with diabetes.

The book serves both as a reference for various scaled models with corresponding dimensionless numbers, and as a resource for learning the art of scaling. A special feature of the book is the emphasis on how to create software for scaled models, based on existing software for unscaled models. Scaling (or non-dimensionalization) is a mathematical technique that greatly simplifies the setting of input parameters in numerical simulations. Moreover, scaling enhances the understanding of how different physical processes interact in a differential equation model. Compared to the existing literature, where the topic of scaling is frequently encountered, but very often in only a brief and shallow setting, the present book gives much more thorough explanations of how to reason about finding the right scales. This process is highly problem dependent, and therefore the book features a lot of worked examples, from very simple ODEs to systems of PDEs, especially from fluid mechanics. The text is easily accessible and example-driven. The first part on ODEs fits even a lower undergraduate level, while the most advanced multiphysics fluid mechanics examples target the graduate level. The scientific literature is full of scaled models, but in most of the cases, the scales are just stated without thorough mathematical reasoning. This book explains how the scales are found mathematically. This book will be a valuable read for anyone doing numerical simulations based on ordinary or partial differential equations.

In UnHealthcare, Silicon Valley entrepreneur and investor Hemant Taneja and Jefferson Health CEO Stephen Klasko, along with writer Kevin Maney, make a provocative case for a new data-driven, cloud-based category of healthcare called \"health assurance.\" The authors show how health assurance can be built using today's technology, how it will help us all stay healthier at less cost, and how data from health assurance services can help individuals and officials contain and manage deadly virus outbreaks such as Covid-19. More than just a thesis, UnHealthcare is a guide to how entrepreneurs, healthcare professionals, and policymakers can bring health assurance to the mainstream and finally develop a solution to America's healthcare debacle.

Annotation Fifty-one papers and 21 posters from the March 2002 symposium report current research in deep submicron integrated circuit design and development. The sessions address interconnect extraction and modeling, design for process variations, metrics, power and noise management, verification, signal integrity, and low power design techniques. Some of the topics are transition aware global signaling (TAGS), the interoperability of EDA tools for sequential logic synthesis, statistical methods for the determination of process corners, power supply noise suppression via clock skew scheduling, and the relation between SAT and BDDs for equivalence checking. \"Twenty years in the making, The Climbers shares a stunning collection of images of some of the icons of mountaineering *Portraits that reveal the core of their remarkable subjects *A visual history of special significance to climbers of all ages *Beautifully packaged in a cloth slip case to enhance its collectability. For nearly 2 decades, professional photographer Jim Herrington has been working on a portrait series of influential rock and mountain climbers. The Climbers documents these rugged individualists who, from roughly the 1930s to 1970s, used primitive gear along with their considerable wits, talent, and fortitude to tackle unscaled peaks around the world. Today, these men and women are renowned for their past accomplishments and, in many cases, are the last of the remaining practitioners from the so-called Golden Age of 20th century climbing.\"--
